

SUMMARY OF TRIAL

AG METRICS GROUP
Formerly Fyffes Ag Group

A study was conducted during July-October 2021 at Santa Maria, California to evaluate the Bioefficacy of PRIVI's product range on yield and productivity of fresh market tomatoes (var. Q99)

Application Details

- Product tested: Crop program of three products were used
- Mode of application: Fertigation & Foliar sprays
- Rate of application:
 - Organofuze Fertigation (Fertigation) 1000 ml/acre (33.8 fl.oz/acre)
 - Agroboost (Foliar sprays) 500 ml/acre (17 fl.oz/acre)
 - CALFUZE (Foliar sprays) 300 g/acre (10 oz/acre)
- Time of application: As per crop program

Type of study

- Field study

Key observation

PRIVI's crop program had exhibited

- Increased in production of large sized tomatoes (13%)
- Increase in weight of large sized tomatoes (14%)
- Reduction in production of cull tomatoes (14%)
- Increase in marketable tomatoes (3%)

Crop program was used where each product was applied 3 times
