

SUMMARY OF TRIAL

A study was conducted during July-November 2021 at Eagle Lake, Texas to evaluate the Bioefficacy of PRIVI's product range on productivity of commercial rice hybrid.

Application Details

- Product tested: Crop program of two products were used
- Mode of application: Soil application & Foliar sprays
- Rate of application:
 - ORGANOFUZE Granules (Soil application) 10 Kg/acre (350 oz/acre)
 - AGROBOOST (Foliar sprays) 500 ml/acre (15 fl.oz/acre)
- Time of application: As per crop program

Type of study

- Field study

Key observation

PRIVI's crop program had exhibited

- Increase in rice productivity by 7%
- Rice productivity was more for PRIVI program over Growers standard even when reduced dose of fertilizers (75%)

Crop program was used where ORGANOFUZE granules (applied once as soil application) and AGROBOOST (two times as foliar sprays)
