

ORGANOFUZE™ FERTIGATION

ORGANOFUZE™ Fertigation is a fully water soluble product having a balanced blend of ingredients targeted to improve soil properties.

Product specifications

Physical Specifications

Contents	Specifications
Formulation type	Water Soluble Liquid
Colour	Dark coloured
pH (1%)	2.0-3.0
Density	1.10-1.20

Chemical Specifications

Contents	Specification
Total Nitrogen (as N; % min)	1.0
Total phosphate (as P ₂ O ₅ ; % min.)	1.0
Soluble Potash (as K ₂ O; % min)	0.5
Soluble silicon (OSA; % min)	0.4
Total Carbon (as C; % min)	25
Total Calcium (as Ca; % min)	0.5

Derived from: Vinasse, Fish protein hydrolysate, Fulvic acid, Potassium silicate, Calcium lignosulfonate

Application Details

Suitable for use in agriculture as soil application. It can be used in combination with water soluble synthetic NPK fertilizers/organic fertilizers or standalone. Suitable for application as soil injection or through fertigation systems

Application Dosage

- All crops: 30-35 fluid oz per acre per application
Higher dose upto 50 fluid oz per acre per application can be used for problematic soils (acidic/sodic/alkali)

Key Benefits

- Improves soil physical properties viz. porosity, water holding capacity.
- Improves soil CEC thus improving nutrient availability to crops
- Improves soil organic carbon content
- Provides conducive microclimate for growth of soil latent microflora.
