

ORGANOFUZE™ GRANULES

ORGANOFUZE™ Granules, is a proprietary blend of ingredients having a proven role in improving soil properties. The granules are prepared using novel Cold Compressed Granulation (CCG) technology. It is a viable alternate to conventional Organic Manures.

Product specifications

Physical Specifications

Contents	Specifications
Formulation type	Granules
Appearance	Dark coloured
pH (1%)	5.00-7.00
Particle size	90% should pass through 4mm IS sieve
Bulk density (g/cm ³)	<1.0

Chemical Specifications

Contents	Specification (%)
Vinasse	30.0
Fish protein hydrolysate	10.0
Fulvic acid	5.0
Diatomaceous earth	45.0
Calcium lignosulfonate	8.0

Method of usage

The product is intended for soil application.

Application Details

Suitable for use in agriculture as soil applications can be applied standalone or after mixing with synthetic NPK fertilizers.

Application Dosage

- Soil application: 20-25 lbs per acre per application. Higher dose upto 37.5-43.7 lbs per acre can be used for problematic soils

Key Benefits

- Improves soil porosity and water holding capacity
- Improves nutrient availability from soil
- Improves soil Cation Exchange Capacity
- Improves soil organic carbon
- Improves population of soil microflora
